

Three phase four wire special power supply core board scheme

CORE BOARD FEATURES

- Integrate 2 MOSFET inside, withstand voltage up to 1300V
- Integrate dedicated high-voltage start controller
- Controllable cost, flexibly select peripheral devices
- Flexible design, meet multiple output requirements
- Quality assurance, provide core control scheme, to improve product stability

SCHEME PRODUCT FEATURES

- Ultra wide input voltage range: 57 - 528VAC/80 - 745VDC
- Circuit can be powered by three-phase four-wire, or any two wires of them
- CE /RE: CISPR32/EN55032 CLASS B
- EFT, Surge: ±4KV Perf. Criteria B
- Output short circuit, over-current, over-voltage protection
- High efficiency, High reliability
- Low ripple & noise, Low standby power consumption

LSC15-26C/Dxx series —Ultra wide input voltage core board solution for electric power, provide the specific peripheral circuit for power supply design. It features ultra wide input voltage, output short circuit, over-current, over voltage protection, high efficiency and high reliability. It is particularly suitable for the electric power, industry control, smart home, EMC application circuit must be added if the products need to be applied to EMC harsh environment.

Core board pin function description

Pin	Pin Name	Function	Describe
1	Vo-	Secondary Side	Secondary Side GND
2	V1	Output Sampling	Output feedback sampling pin
3	V2	Input Feedback	Optocoupler and 431 power supply pin
4	Trim	Trim	Output voltage adjustable
5	FA	Input Voltage Detection	To provide voltage and timing feedback to the controller. The pin is connected to a voltage divider between an auxiliary winding and GND. The upper resistance value of the voltage divider can be used to adjust the line voltage compensation strength of the power supply, the ratio of upper and lower resistors can be used to adjust the output voltage stability.
6	GND	Primary Side	Primary Side GND
7	VDD1	VCC	Provide power to Chip terminal from the by-pass capacitor
8	Vd	Drain terminal	Drain terminal of power MOSFET
9	HV	High Voltage Input	High voltage input terminal, provide power to VDD shunt capacitor to start the controller, from the input voltage
10	Vgs	High Voltage Midpoint	Midpoint of the input capacitor voltage, to provides a reference voltage for the module

Note:

The output filter capacitor(C2、C4、C6) is electrolytic capacitor, high frequency and low resistance electrolytic capacitor is preferred, capacity and current refer to the technical specification provided by the manufacturers. Capacitance Withstand Voltage drop to at least 80%. Ceramic capacitors(C1、C3、C5)used to remove high frequency noise. TVS is a recommended component to protect post-circuits if converter fails.

3. For more information Please find the application note on www.mornsun-power.com

Note:

1. LSC15-26C/Dxx core board must be designed with recommend peripheral circuit;
2. Packing information please refer to Product Packing Information which can be downloaded from www.mornsun-power.com .
Packing bag number: 58020024;
3. If the product is not operated within the required load range, the product performance cannot be guaranteed to comply with all parameters in the datasheet;
4. Unless otherwise specified, parameters in this datasheet were measured under the conditions of $T_a=25^{\circ}\text{C}$, humidity<75% with nominal Input-voltage and rated output load;
5. All index testing methods in this datasheet are based on our Company's corporate standards;
6. We can provide product customization service, please contact our technicians directly for specific information;
7. Products are related to laws and regulations: see "Features" and "EMC";
8. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
