## 3000VAC isolation test voltage, EPC13, flyback transformer

## **FEATURES**

- 85 ~ 305VAC wide input voltage range
- EPC13 Bobbin
- Meets UL/EN 62368 standards

TTLS03-15BxxT transformer series feature with 3000VAC primary to secondary isolation, an operating ambient temperature range of -40°C ~ +110°C. It can be used with our control IC SCM1702ASA to achieve flyback power supply design with wide input volatge range and various protection functions and superior EMI performance.

Notes: 1) The test signal of the inductance are 10kHz and 100mV, test the leakage inductance of N1 based on N2 and N3 are shorted; (2)To ensure the transformer will not saturate in all of the applications and conditions, the peak flux density (Bm) should remain below 3000Gauss. Use the following formula to calculate the peak flux density: Bm=K\*Ipk, Ipk stands for the peak current of input, which unit is A; ③Approximate transformer core loss(Pcv) can be calculated as following formula: Pcv=3.9E-14\*f<sup>1.82\*</sup>△B<sup>2.59</sup>, the unit of Pcv is W, f stands for operating frequency, which unit is kHz,  $\triangle B$  is the operating flux density, which unit is Gauss.  $\triangle B$  can be calculated as:  $\triangle B$ =K\* $\triangle I$ .
